

Declaration of Performance

1404-CPR-2657

1. Unique identification code of the product-type: Torque controlled expansion anchor made of stainless steel m1tr for use in concrete

2. Manufacturer: Mungo Befestigungstechnik AG, Bornfeldstrasse 2, CH-4603 Olten/Switzerland

3. System/s of AVCP: System 1

4. Intended use or use/es:

Product	Intended use
Metal anchors for use in concrete	For fixing and/or supporting to concrete, structural elements (which contributes to the stability of the works) or heavy units

5. European Assessment Document: ETAG 001 – part 1 and 2, edition 2013, used as EAD

European Technical Assessment: ETA-12/0375 of 11.08.2015

Technical Assessment Body: ZAG - Zavod za gradbenistvo Slovenije

Notified body/ies: ZAG

6. Declared performance:

Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic values and characteristic values for resistance	See appendix, especially Annexes C1 to C4

Safety in case of fire (BWR 2)

Essential characteristic	Performance
Characteristic for safety in case of fire	See appendix Annex C5

The performance of the product identified above is in conformity with the set of declared performance/s. This declaration of performance is issued, in accordance with Regulation (EU) No 305/2011, under the sole responsibility of the manufacturer identified above.

Signed for and on behalf of the manufacturer by:

Dipl.-Ing. Massimo Pirozzi

Head of Engineering

Olten, 2017-22-12

This DoP Has been prepared in different languages. In case there is a dispute on the interpretation the English version shall always prevail.

The Appendix includes voluntary and complementary information in English language exceeding the (language as neutrally specified) legal requirements.

- 1 Anchor bolt (body)
- 2 Expansion sleeve
- 3 Washer
- 4 Hexagonal nut

m1tr-Stahlbolzen rostfrei A4

Product description
Product and materials

Annex A2

Specifications of intended use**Anchorage subjected to:**

- Static, quasi static, seismic load and fire.

Base materials:

- Cracked and non-cracked concrete.
- Reinforced and unreinforced normal weight concrete of strength class C20/25 at minimum and C50/60 at maximum according to EN 206-1:2000/A2:2005.

Use conditions (Environmental conditions):

- The anchor may be used in concrete subject to dry internal conditions and also in concrete subject to external atmospheric exposure (including industrial and marine environment), or exposure in permanent damp internal conditions, if no particular aggressive conditions exist.

Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. desulphurization plants or road tunnels where de-icing materials are used)

Design:

- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Anchorages under static and quasi-static actions are designed in accordance with ETAG 001, Annex C, design method A, Edition August 2010 or CEN/TS 1992-4-4.
- For seismic application the anchorages are designed in accordance with TR 045 "Design of metal anchors for use in concrete under seismic actions".
- For application with resistance under fire exposure the anchorages are designed in accordance with method given in TR 020 "Evaluation of anchorage in concrete concerning resistance to fire".
- Verifiable calculation notes and drawings are prepared taking into account of the load to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.).

Installation:

- Anchor installation carried out by appropriately qualified personnel and under supervision of the person responsible for technical matters of the site.
- Use of the anchor only supplied by the manufacturer without exchanging the components of an anchor.
- Anchor installation in accordance with the manufacturer's specification and drawings and using the appropriate tools.
- Checks before placing the anchor to ensure that the strength class of the concrete in which the anchor is to be placed is in the range given and is not lower than that of the concrete to which the characteristic loads apply for.
- Check of concrete being well compacted, e.g. without significant voids.
- Effective anchorage depth, edge distances and spacing not less than the specified values without minus tolerances.
- Hole drilling by hammer drill.
- Cleaning of the hole of drilling dust.
- Positioning of the drill holes without damaging the reinforcement.
- Application of specified torque moment using a calibrated torque wrench.
- In case of aborted hole, drilling of new hole at a minimum distance of twice the depth of the aborted hole, or smaller distance provided the aborted drill hole is filled with high strength mortar and no shear or oblique tension loads in the direction of aborted hole.

Characteristic resistance under Seismic actions – BWR 1

Annex C3

Table C4: Characteristic values for resistance in case of Seismic performance category C2 acc. TR045 "Design of Metal anchor under Seismic Actions"

Essential characteristics			Performance			
			M8	M10	M12	M16
Tension steel failure						
$N_{Rk,s,seis} C2^{2)}$	Characteristic tension steel failure	[kN]	21	34	49	88
$\gamma_{MsN}^{3)}$	Partial safety factor	[-]	1,5			
Pull-out failure $N_{Rk,p,seis} = \psi_C \times N_{Rk,seis}^0$						
$N_{Rk,s,seis} C2^{2)}$	Characteristic pull-out failure in concrete C20/25	[kN]	-	2,4	8,8	21,9
$\gamma_{MpN}^{3)}$	Partial safety factor	[-]	1,5			
$\delta_{N,sei(DLS)}^{1)2)}$	Displacement at DLS	[mm]	-	2,9	4,9	6,3
$\delta_{N,sei(ULS)}^{1)2)}$	Displacement at ULS	[mm]	-	15,8	15,7	21,0
Shear steel failure						
$V_{Rk,s,seis} C2^{2)}$	Characteristic shear failure	[kN]	-	12,3	15,8	36,6
$\gamma_{MsV}^{3)}$	Partial safety factor	[-]	1,3			
$\delta_{V,sei(DLS)}^{1)2)}$	Displacement at DLS	[mm]	-	2,4	5,2	6,0
$\delta_{V,sei(ULS)}^{1)2)}$	Displacement at ULS	[mm]	-	4,1	9,7	10,7

¹⁾ The listed displacement represent mean values

²⁾ A smaller displacement may be required in the design in the case of displacement sensitive fastenings or "rigid" supports. The characteristic resistance associated with such smaller displacement may be determined by linear interpolation or proportional reduction.

³⁾ The recommended partial safety factors under seismic action ($\gamma_{M,seis}$) are the same as for static loading
